**VBA Like operator - using wildcards in conditional statements**

In VBA, you can compare two strings using the Like operator to check matching of the strings. In this tutorial, you will learn how to use this operator with different patterns. If you want to learn how to compare strings in VBA, click here: [VBA Compare Strings - StrComp](#) If you want to learn how...

**VBA Like Operator - Automate Excel**

The Like operator can be overloaded, which means that a class or structure can redefine its behavior when an operand has the type of that class or structure. If your code uses this operator on such a class or structure, be sure you understand its redefined behavior. For more information, see [Operator Procedures](#). Example

**Like Operator (Visual Basic) | Microsoft Docs**

The VBA Like operator allows you to compare strings against a pattern. You can search a string to check if it contains another string, or you can check if a string conforms to a certain format. You can search a string to check if it contains another string, or you can check if a string conforms to a certain format.

**VBA Like Operator • My Online Training Hub**

I'm having trouble using the LIKE operator in a string and hope the below makes sense. My Loop works well if I manually type in what the variable "strCatSelect" currently contains. It also works well if the string vale only contains ONE value as below. The problem is when the string is longer and I need to know if the string contains what is currently in "strCatSelect".

**Using LIKE Operator in VBA Variable - Excel Help Forum**

like-operator.xlsm Excel VBA Reference This extensive vba reference list provides detailed information including syntax, arguments, return values, and examples for Visual Basic for Applications.

**Working with the LIKE OPERATOR - Get Digital Help**

LIKE operator in Excel. ... It acts like the LIKE operator in SQL. You can't use the word like as the function name because it's a reserved word in Visual Basic for Applications (VBA). The function lets you compare any string to see if it is contained in another string. The default mode is case-insensitive, and the override mode case-sensitive.

**How to implement a LIKE operator in Excel**

to return 1 if the pattern matches and 0 if it doesn't. By limiting the range argument of COUNTIF to one cell, it acts somewhat like a LIKE function would. Using COUNTIF, you don't have the range of patterns that are available to you with the Like operator in VBA. You basically just have the ...
