Yoshi is a dinosaur-like character that acts as an ally of Mario and Luigi and is the protagonist of his own franchise. Among members of the Yoshi species hailing from Yoshi's island, any Yoshi may be identified as the "Yoshi" character, and as such, not all iterations of the character are necessarily the same one. According to the Super Mario World manual, he got his name from Yoshi's Island ...

Because of their high metabolic rates, birds must consume more food in proportion to their size than most animals. For example, a warbler might eat 80 percent of its body weight in a day. As a group, birds consume just about any type of food you can imagine, including amphibians, ants, buds, carrion, crustaceans, fish, fruit, grass, insects, larvae, leaves, molluscs, nectar, other birds, pollen ...

The rosy apple aphid (*Dysaphis plantaginea*) deforms fruit, producing "aphis apples." Its feeding activity causes leaves to curl about it, providing some protection from insecticide sprays. The life cycle involves plantain plants as alternate hosts from which the aphid returns to the apple tree to deposit eggs in the fall.

Testosterone increases availability of carotenoids-- Androgens and carotenoids play a fundamental role in the expression of secondary sex traits in animals that communicate information on individual quality. In birds, androgens regulate song, aggression, and a variety of sexual ornaments and displays, whereas carotenoids are responsible for the red, yellow, and orange colors of the integument.
