King Snakes For Sale - BHB Reptiles

The Mexican black kingsnake regularly feeds on other snakes in the wild, such as rattlesnakes (whose venom has little to no effect on them), so it is advisable that they be housed alone. Diet. In captivity, they can remain in excellent health through "an all rodent diet" (e.g., mice, rats) and are opportunistic feeders.

Mexican black kingsnake - Wikipedia

The majority of kingsnakes have quite vibrant patterns on their skins. Some species of kingsnake, such as the scarlet kingsnake, Mexican milk snake, and red milk snake, have coloration and patterning that can cause them to be confused with the highly venomous coral snakes.

Kingsnake - Wikipedia

The king of snakes: If you've lived in California for a while, chances are good that you've encountered a king—a kingsnake, that is! Kingsnakes are one of the most widespread snake species in the US. They are ground-dwelling snakes that often kill and eat other snakes, even venomous ones, including rattlesnakes, copperheads, and cottonmouths—kingsnakes are highly resistant to their venom.

Kingsnake | San Diego Zoo Animals & Plants

Well, what the heck. We could do a duck AND check out a few snakes as well. Good thing we decided that, because the duck ducked us, but the snakes were active on all of the berms and trails. There were no rarities, but there was a lot of color variation. The snakes were all natricines—water snakes, ribbon snakes, and red-bellied swamp snakes.

kingsnake.com - reptile and amphibian classifieds ...

In the wild, they will eat other snakes, lizards, amphibians, rodents, and birds. Snakes are a common food item, and they have the ability to eat larger snakes, with some eating even rattlesnakes as a staple in their diet. Both king and milk snakes will try to eat cage mates, so should be housed on their own.

Choosing a King Snake or Milk Snake as a Pet

Illinois snake species hibernate during the cold winter months, becoming active in spring as temperatures and day length increase. Snakes are cold-blooded and can be seen basking in the sun on logs or other objects. They are generally active during the day, but they can become nocturnal when summer temperatures rise. Snakes are solitary predators.

Wild About Illinois Snakes!

Description: Description: Eastern kingsnakes are large -- 36 - 48 in (90-122 cm) -- shiny-black, smooth-scaled snakes with white or yellow chain-link bands that cross the back and connect along the sides. Because of this pattern this species is also referred to as the chain kingsnake. Generally, individuals from the Coastal Plain have wide bands while those from the mountains may have very ...
