

## *Model Based Design Of Adaptive Embedded Systems*

### **Model Based Design Of Adaptive**

Adaptive web design (AWD) promotes the creation of multiple versions of a web page to better fit the user's device, as opposed to a single static page which loads (and looks) the same on all devices or a single page which reorders and resizes content responsively based on the device/screen size/browser of the user. This most often describes the use of a mobile and a desktop version of a page ...

An agent-based model (ABM) is a class of computational models for simulating the actions and interactions of autonomous agents (both individual or collective entities such as organizations or groups) with a view to assessing their effects on the system as a whole. It combines elements of game theory, complex systems, emergence, computational sociology, multi-agent systems, and evolutionary ...

Many contemporary research efforts are concentrating on creating new approaches to more closely link science, management and policy at an ecosystem level. At base, these efforts represent a search for a research and development model and practice which combine the...Read more Adaptive management - "learning by doing" >

Model-based testing (MBT) By Zoltán Micskei. Testing is an essential, but time and resource consuming activity in the software development process. Generating a short, but effective test suite usually needs a lot of manual work and expert knowledge.

### **Model-based testing overview, tools and projects**

At first glance, SSMPC is a deterministic optimization problem with a large number of constraints. Due to the randomness of sampling  $N$   $t$  realizations, the optimal solution  $\{M^*, h^*\}$  to SSMPC itself is a random variable. Therefore, whether  $\{M^*, h^*\}$  satisfies the chance constraint or not is uncertain. Intuitively, if we have sufficient data samples in the scenario-based problem SSMPC, the risk ...

The design should adapt to changes in the wireless environment. The basic approach is to estimate the attenuation and delay of the self-interference signal and match the inverse signal appropriately.

MobileCoach. The vision of the MobileCoach team is to provide an open source behavioral intervention platform for fully-automated digital interventions. Due to a modular and extendable structure as well as an architecture rooted in the logics and legal claims of open-source software, the MobileCoach lays a fruitful ground for digital interventions in several application domains of behavior change.

The Ultimus Adaptive BPM Suite is based on a set of modules and components used to manage the complete BPM lifecycle. Each module is designed to fit the needs of each group of BPM stakeholders and they are seamlessly integrated to provide a company with the tools to model, automate, manage and optimize their key business processes.
