In fluid dynamics, drag (sometimes called air resistance, a type of friction, or fluid resistance, another type of friction or fluid friction) is a force acting opposite to the relative motion of any object moving with respect to a surrounding fluid. This can exist between two fluid layers (or surfaces) or a fluid and a solid surface. Unlike other resistive forces, such as dry friction, which ...

Many materials have a well-characterized refractive index, but these indexes depend strongly upon the frequency of light. Standard refractive index measurements are taken at the "yellow doublet" sodium D line, with a wavelength of 589 nanometers. There are also weaker dependencies on temperature, pressure/stress, etc., as well on precise material compositions (presence of dopants, etc.); for ...

Dalga (veya eski ifadesiyle mevce), bir fizik terimi olarak uzayda ve maddede yayılan ve enerjinin taşınmasına yol açan titreşime denir. Dalga hareketi, orta parçaların yer değişimi sıklıkla olmadan, yani çok az ya da hiç kütle taşınımı olmadan, enerjiyi bir yerden başka bir yere taşır. Dalgalar sabit konumlarda oluşan titreşimlerden oluşurlar ve zamanla nasıl ...
