

Token Ring Technology Report

Token Ring Technology Report

Token Ring local area network (LAN) technology is a communications protocol for local area networks. It uses a special three-byte frame called a "token" that travels around a logical "ring" of workstations or servers. This token passing is a channel access method providing fair access for all stations, and eliminating the collisions of contention-based access methods.

Token ring - Wikipedia

At the very beginnings of the Internet era in 1988, a small group of enthusiastic engineers started Accton Technology Corporation with a vision of the importance that networking products would have in the future of computing.
